

AYN Privacy Policy (2017-2018)

Active Youth Network Members have placed great trust in us to allow our mobile applications to link and run on their systems, and this is a trust we return and foster. We treat our members with the highest level of personal respect: we don't open members up to security risks, unwanted spam, or invasion of privacy. Here is our policy:

Privacy & Security

Active Youth Network assures Members that applications will not damage their systems or invade their privacy in any way. Our agent runs unobtrusively in the computing background and is not invasive. It cannot detect or change any other files or material on Members servers or sites. It can only update project-specific data in its own files.

Members will be able to control how much of their system resources are used by Active Youth Network and will be given user preference options on a wide range of factors, including:

- 1) Whether the program runs as an application.
- 2) When computation and communication can be performed.
- 3) Whether connections are made automatically.

To protect Member privacy, members receive a member name when they install the Active Youth Network Websites or Mobile applications. This member name is maintained in the Member profile and used to identify each member.

There are security risks in every application downloaded from the Internet or on mobile devices, period. However, we take security very seriously at Active Youth Network and have partnered with Amazon Web Services. We have a comprehensive system of technology and policies to protect you, your computer, and the data running on it. The measures that we use include, but are not limited to, virus scanning all of our build environments, digitally signing information sent to the Active Youth Network Agent, encryption both of locally stored files and files sent to the Active Youth Network Agent, and biometric access control to the Active Youth Network servers. We do everything we can to keep both the Active Youth Network Agent and our server systems as secure as possible.

Tracking technology

We use standard tracking technology on our websites and mobile apps, commonly known as "cookies," to help us deliver a customized experience to Members. Our use of this technology does not mean that we automatically know any information about individual members - we do not.

To run our applications, Active Youth Network software automatically detects certain basic information from a Member's machine; this includes info about the Member's processor speed and set preferences regarding disk space, memory and times to run the projects. Members will have access to the information about the properties that are measured by the Active Youth Network tools and for what purpose this information will be used.

Active Youth Network may provide aggregate member information such as average computing power and geographic dispersion to partners or customers. The information will be released in aggregate form only and, no personally identifiable information will ever be released. Neither Active Youth Network nor our customers can access any other information on a Member computer or identify anything else for which a Member uses his or her computer.

Communications

The Active Youth Network provides members with a [Contact Us](#) feature. For problem resolution, this method of communication is used by members as a primary source of engagement. The Active Youth Network website provides members with a feature to send an e-mail message to our customer support team for immediate help and assistance.

About this member policy

This privacy statement applies only to the Active Youth Network. Active Youth Network contains links to other websites which have their own privacy statements. On other websites, please review their privacy statements before submitting any information.
